

SAI SANTOSH KUMAR DEVARASETTY

dsaisantoshkumar@gmail.com | (601) 913-1606 | Bentonville, AR

PROFESSIONAL SUMMARY

Backend software developer with 3+ years of experience building applications and services in Python and Java, with strong hands-on skills in REST/OData API design, development, and testing. Experienced using Postman to validate and troubleshoot API endpoints, alongside SQL and relational/SAP HANA database integration. Background also includes SAP S/4HANA development with Object-Oriented ABAP, CDS Views, RAP, BAPIs, BADIs, and RFCs. Comfortable across the full development of lifecycle coding, unit and API testing, code reviews, debugging, and production support within Agile teams.

CORE COMPETENCIES

Backend Development (Python, Java) • REST & OData API Design and Testing • Postman API Validation • SQL & Relational Databases • SAP S/4HANA & ABAP Development • Automation & Scripting • Unit & Integration Testing • Agile/Scrum Delivery • Debugging & Production Support

TECHNICAL SKILLS

Programming: Python, Java, SAP ABAP, Object-Oriented ABAP, SQL, JSP, Servlets

Backend & Integration: REST APIs, OData Services, BAPI, BADI, RFC, IDoc, JSON, Database Integration

Testing & Validation: Postman, Unit Testing, API Testing, Debugging, Code Reviews, UAT Support

SAP: SAP S/4HANA, RAP, CDS Views, AMDP, SAP HANA, ALV Reports, Enhancements, Interfaces, Data Migration Support

Databases & OS: MySQL, Relational Databases, SAP HANA, Linux, Unix

Tools & Practices: Git, SAP GUI, Eclipse ADT, Postman, Agile/Scrum, SDLC, Performance Tuning

PROFESSIONAL EXPERIENCE

Tech ProFeb 2026 – Present

Python Developer

- Develop and maintain Python backend components and REST APIs that support application workflows and system integrations.
- Create automation scripts and data-processing utilities with validation, logging, and exception handling to improve consistency in recurring operational tasks.
- Implement database operations and write SQL queries for data retrieval, validation, reporting, and application updates.
- Write and execute unit and API test cases, including Postman-based validation of REST endpoints, to verify functionality before release.
- Investigate application defects and production incidents, identify root causes, and deliver targeted fixes and functional enhancements.
- Refactor shared modules into reusable functions and components to improve code readability, maintainability, and testability.
- Use Git within an Agile development process and participate in code reviews, testing, sprint activities, and release support.

CVS Health (Client)Jan 2025 – Jan 2026

SAP ABAP Developer – Contract | Employers of record: Signitives (Jan 2025 – Apr 2025), 3A IT Solutions (Apr 2025 – Jan 2026)

- Developed a configurable data-retention solution using TVARVC parameters to control business-defined retention periods and automate recurring cleanup of historical records.
- Resolved critical performance and stability issues in a payment-processing dataset containing more than 1 billion records by separating reversal and canceled transactions from active processing.
- Designed custom staging tables to validate and process hierarchical invoice and claim data before loading records into downstream target tables.
- Created parameterized CDS Views for complex parent-child invoice relationships (PI, IC, IA, and IB), including aggregation logic for reconciliation and operational reporting.
- Built reusable Object-Oriented ABAP classes with encapsulated validation, retention, deletion, and exception-handling logic for high-volume processing.

- Developed and enhanced RAP-based applications, CDS data models, reports, and SAP S/4HANA extensions in collaboration with functional consultants.
- Created and supported OData services, including SAP Gateway implementations for CRUD operations, using Postman to test and validate endpoints prior to release.
- Developed and enhanced enterprise interfaces using BAPIs, BADIs, RFCs, IDocs, and custom ABAP logic, with error handling and reprocessing support.
- Improved database-intensive programs through optimized Open SQL, bulk operations, AMDP/code-pushdown techniques, and focused SQL performance analysis.
- Supported data migration, unit testing, code reviews, UAT, production deployments, and debugging business critical issues across development, quality, and production environments.

Cloude9Feb 2024 – Jan 2025

Java & Python Developer

- Developed backend components in Java and Python for business applications, with emphasis on clear service logic and maintainable implementation.
- Built and enhanced REST API endpoints, including request validation, structured responses, and application-level error handling.
- Used Postman to test, document, and validate REST API endpoints across development and QA environments.
- Integrated application services with relational databases and wrote SQL queries for data retrieval, updates, and reporting requirements.
- Diagnosed defects, implemented application enhancements, and improved performance in targeted areas based on testing and production feedback.
- Created reusable modules and shared utilities to reduce duplicate code and simplify future maintenance.
- Supported production issues and collaborated through Git-based version control, Agile ceremonies, testing, and peer code reviews.

Cognizant Technology SolutionsOct 2021 – Jul 2022

Programmer Trainee

- Completed structured training in Java, Linux, Unix, SQL, MySQL, software development life cycle practices, and enterprise coding standards.
- Developed Java web application components using JSP and Servlets to support server-side request processing and database-driven functionality.
- Wrote SQL queries for complex data retrieval and reporting and worked with relational database concepts and query optimization.
- Assisted with backend development, debugging, defect analysis, and validation of Java application changes.
- Resolved customer technical support and helpdesk tickets, documented findings, and escalated issues when additional investigation was required.
- Collaborated with team members during development and testing while building practical experience with enterprise delivery processes.

SELECTED PROJECTS

JobBot: AI-Powered Job Application Automation (Personal Project)

- Built an automated job-application system in Python using Playwright for browser automation and a locally hosted LLM (LM Studio) for AI-based job/resume match scoring.
- Developed application handlers for LinkedIn Easy Apply and Dice, including resume loading, job scraping, filtering logic, and database-backed application tracking.
- Debugged and hardened the Easy Apply flow, resolving field-selector, infinite-loop, and form-validation issues, and expanded keyword mappings for automated form responses.
- Integrated EmailJS for automated status notifications.

Stock Monitor Pro: Real-Time Stock Dashboard (Personal Project)

- Built and deployed a stock-monitoring dashboard on GitHub Pages, integrating the Yahoo Finance API through a CORS proxy for live market data.
- Implemented technical indicators (RSI, Moving Averages, MACD, Bollinger Bands) and AI-assisted analysis using a local LLM.
- Added EmailJS-based alerting for price and signal thresholds.

AI Email Auto-Reply System (Personal Project)

- Built an end-to-end Python pipeline for recruiter email handling: IMAP-based Gmail fetch, email classification, job-description extraction, and TF-IDF resume matching.
- Generated automated, context-aware replies using a locally hosted LLM (Meta Llama 3.1 8B via LM Studio) and sent responses via SMTP with dynamic resume attachment.

CERTIFICATIONS

- ABAP RESTful Application Programming Model (RAP) and Extensions
- SAP Professional Fundamentals
- SAP ABAP Fundamentals
- Google AI Essentials
- LLM Knowledge Certification

EDUCATION

Master of Science in Computer and Information Science - University of Southern Mississippi | Dec 2023

Bachelor's degree in computer science, Statistics, and Mathematics - Acharya Nagarjuna University | 2021
