

SAI SANTOSH KUMAR DEVARASETTY

dsaisantoshkumar@gmail.com | (601) 913-1606 | Bentonville, AR

PROFESSIONAL SUMMARY

Backend software developer with 3+ years of experience building applications and services in Python and Java, with strong hands-on skills in REST/OData API design, development, and testing. Experienced using Postman to validate and troubleshoot API endpoints, alongside SQL and relational/SAP HANA database integration. Background also includes SAP S/4HANA development with Object-Oriented ABAP, CDS Views, RAP, BAPIs, BADIs, and RFCs. Comfortable across the full development lifecycle, including coding, unit and API testing, code reviews, debugging, and production support within Agile teams.

CORE COMPETENCIES

Backend Development (Python, Java) | REST & OData API Design and Testing | Postman API Validation | SQL & Relational Databases | SAP S/4HANA & ABAP Development | Automation & Scripting | Unit & Integration Testing | Agile/Scrum Delivery | Debugging & Production Support

TECHNICAL SKILLS

Programming: Python, Java, SAP ABAP, Object-Oriented ABAP, SQL, JSP, Servlets

Backend & Integration: REST APIs, OData Services, BAPI, BADI, RFC, IDoc, JSON, Database Integration

Testing & Validation: Postman, Unit Testing, API Testing, Debugging, Code Reviews, UAT Support

SAP: SAP S/4HANA, RAP, CDS Views, AMDP, SAP HANA, ALV Reports, Enhancements, Interfaces, Data Migration Support

Databases & OS: MySQL, PostgreSQL, Oracle, Relational Databases, SAP HANA, Linux, Unix

Frameworks & Cloud: Spring, Spring Boot, Spring MVC, Spring Security, Microservices, AWS, Kubernetes, Docker, Kafka, Redis

Tools & Practices: Git, SAP GUI, Eclipse ADT, Postman, Jenkins, Azure DevOps, Agile/Scrum, SDLC, Performance Tuning

PROFESSIONAL EXPERIENCE

Tech Pro, NJ

Feb 2026 - Present

Python Developer

- Develop and maintain Python backend components and REST APIs that support application workflows and system integrations.
- Create automation scripts and data-processing utilities with validation, logging, and exception handling to improve consistency in recurring operational tasks.
- Implement database operations and write SQL queries for data retrieval, validation, reporting, and application updates.
- Write and execute unit and API test cases, including Postman-based validation of REST endpoints, to verify functionality before release.
- Investigate application defects and production incidents, identify root causes, and deliver targeted fixes and functional enhancements.
- Refactor shared modules into reusable functions and components to improve code readability, maintainability, and testability.
- Use Git within an Agile development process and participate in code reviews, testing, sprint activities, and release support.

CVS Health (Client) Jan 2025 - Jan 2026

SAP ABAP Developer, Contract | Employers of record: Signitives (Jan 2025 to Apr 2025), 3A IT Solutions (Apr 2025 to Jan 2026)

- Developed configurable data retention solutions using the TVARVC table to automate historical data cleanup processes based on business-defined retention policies, reducing manual maintenance efforts.
- Resolved critical performance bottlenecks and system instability issues in high-volume payment processing systems containing over 1 billion records by implementing a scalable data separation strategy for reversal transactions.
- Designed and implemented custom staging tables to process hierarchical invoice and claim data before dynamically loading data into target tables for downstream processing.
- Developed advanced CDS Views with input parameters to support complex parent-child invoice relationships (PI, IC, IA, IB), enabling dynamic aggregation and real-time invoice reconciliation reporting.
- Built reusable and modular Object-Oriented ABAP applications using SE24 Class Builder, implementing robust exception handling, encapsulation, and reusable utility classes for high-volume enterprise operations.

- Developed HANA-optimized AMDP procedures and database-intensive business logic using code pushdown techniques to improve runtime performance and reduce SAP application server load.
- Developed CDS Views and exposed them as OData services for SAP Fiori applications, and designed OData services using SAP NetWeaver Gateway (SEGW) with full CRUD operations for external system integrations.
- Designed optimized SAP HANA data models using CDS Views and HANA Studio to support enterprise reporting, analytics, and high-volume transaction processing requirements.
- Utilized Native SQL, ADBC, and optimized Open SQL techniques (FOR ALL ENTRIES, bulk INSERT FROM TABLE, aggregate functions) to significantly improve reconciliation and report execution times.
- Implemented SAP Landscape Transformation (SLT) replication solutions to replicate reversal transaction data in real time to archive environments and external GCP systems for compliance and audit reporting.
- Designed, tested, and supported end-to-end SAP interfaces using IDocs, RFCs, and Web Services, implementing robust error-handling and reprocessing logic to improve interface stability and reduce manual intervention.
- Collaborated with business and functional stakeholders across Agile SDLC environments (DEV, QAS, PRD) to gather requirements, support UAT and production deployments, and contribute to ECC to S/4HANA modernization initiatives using RAP, CDS Views, and AMDP.

Cloudninetek LLC, Charlotte, NC

Feb 2024 - Jan 2025

Software Developer

- Developed and tested the infotainment module with Agile Scrum, delivering a stable release that met project timelines.
- Built a Single Page Application with AngularJS that bound data to views and synchronized with the server, improving user interaction speed.
- Enhanced existing applications by adding a role-based HTML navigation menu in AngularJS, which dynamically updated menu items from XML data in the database, simplifying user navigation.
- Created and injected Spring services, controllers, and DAOs with autowired annotations, enabling modular business logic and reducing code coupling.
- Developed Spring MVC UI screens for system login and network element operations, streamlining user workflows and decreasing login errors.
- Implemented microservices with Spring Boot and Spring Cloud Netflix components (Config Server, Eureka Server, Hystrix, Discovery Client, Ribbon, Zuul Proxy), improving configuration management and load balancing across services.
- Used the Spring framework's dependency injection to decouple application layers, enabling a service-oriented architecture that simplified maintenance and made it easier to add new features.
- Implemented RESTful web services in a SOA, called them from AngularJS to deliver data to the client, and secured the endpoints with Spring Security, resulting in a secure and responsive front-end experience.
- Utilized multithreading and concurrency to process large datasets in parallel, enhancing throughput and maximizing CPU utilization.
- Configured Redis to manage HTTP session state in a distributed Spring Boot application, enabling scalability and ensuring consistent user session data across multiple instances.
- Worked on AWS, high availability practices, and deploying backup and restore infrastructure.
- Implemented custom monitoring systems using Splunk within deployment pipelines, enabling early detection of failures.
- Developed PostgreSQL stored procedures and triggers to automate business logic at the database level, improving consistency and reducing application-side processing.
- Integrated Apache Kafka to publish message objects to client queues and topics, facilitating real-time data delivery.
- Added Hibernate annotations for Oracle DB to simplify ORM mapping, decreasing manual SQL coding effort.
- Integrated Couchbase with Java Spring Boot microservices using Spring Data Couchbase to handle large distributed data, improving data retrieval speed and reducing latency.
- Deployed and managed microservices-based applications using Kubernetes, ensuring high availability and scalability, and kept services running with minimal downtime.
- Configured CI/CD pipelines with Azure DevOps, enabling seamless build and deployment automation and shortening release cycles.
- Developed strategies and tools for an automated integration and release process using Jenkins, which streamlined releases and reduced manual effort.
- Analyzed and resolved merge conflicts in Git, maintaining codebase stability and preventing integration delays.
- Implemented Log4j for application logging, defining debug levels to control log output and simplify troubleshooting, which improved debugging efficiency.

- Implemented a Selenium data-driven testing framework integrated with Maven, TestNG, and Jenkins, which streamlined automated test execution and increased test coverage.

Cognizant Technology Solutions, India

Oct 2021 - Jul 2022

Programmer Trainee

- Completed structured training in Java, Linux, Unix, SQL, MySQL, software development life cycle practices, and enterprise coding standards.
- Developed Java web application components using JSP and Servlets to support server-side request processing and database-driven functionality.
- Wrote SQL queries for complex data retrieval and reporting and worked with relational database concepts and query optimization.
- Assisted with backend development, debugging, defect analysis, and validation of Java application changes.
- Resolved customer technical support and helpdesk tickets, documented findings, and escalated issues when additional investigation was required.
- Collaborated with team members during development and testing while building practical experience with enterprise delivery processes.
